

## CheckMate V2

**Tip:** Fixing this error: - options.allowedHosts[0] should be a non-empty string.

**Tip:** Fixing Macbook deploy issues

**Tip:** Comparing both versions of CheckMate

**Tip:** Running VSCode from command in terminal on mac m1

**Tip:** Using Google Meet for meetings

**Tip:** Getting the solution run in a docker container

**Tip:** Deploying to Heroku (Got it to work)

<https://shrouded-gorge-59241.herokuapp.com/#/>

**Tip:** Deploying to Heroku (Got it to work)

Deploying to Heroku is super easy!!!

Most important step, do a build first to see where what your build location is:

npm run build

This determines lines 48 and 51 below

I made this mistake before, the /dist folder is when you are building a VUEJS app, like my assetmgmt2022 **creates VERY IMPORTANT !!!!!!!**

```
40 app.use('/api/manager', require('./routes/api/manager'));
41 //http://localhost:5500/api/rep
42 app.use('/api/rep', require('./routes/api/rep'));
43 //http://localhost:5500/api/receipt
44 app.use('/api/receipt', require('./routes/api/receipt'));
45
46
47 //Server static assets in production
48 if(process.env.NODE_ENV === 'production')
49 {
50   //Set static folder (our public folder) - dist = VUE JS/ build = react
51   app.use(express.static('client/build'));
52   app.get('*', (req, res) => {
53     res.sendFile(path.resolve(__dirname, 'client', 'build', 'index.html'));
54   })
55 }
56
57
58
59 //HEROKU LOOKS AT THE process.env.PORT
```

Next you do:

Heroku login

Heroku create

It creates a repo

Go to deploy on the dashboard

Install the Heroku CLI

Download and install the [Heroku CLI](#).

If you haven't already, log in to your Heroku account and follow the prompts to create a new SSH public key.

```
$ heroku login
```

Clone the repository

Use Git to clone shrouded-gorge-59241's source code to your local machine.

```
$ heroku git:clone -a shrouded-gorge-59241
$ cd shrouded-gorge-59241
```

Deploy your changes

Make some changes to the code you just cloned and deploy them to Heroku using Git.

```
$ git add .
$ git commit -am "make it better"
$ git push heroku master
```

---

Follow the instructions, do a  
heroku git:remote -a shrouded-gorge-59241

```
Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\DevProjects\Programming\Nodejs\checkmatev2> heroku git:remote -a shrouded-gorge-59241
set git remote heroku to https://git.heroku.com/shrouded-gorge-59241.git
```

Then do a  
git add .

git commit -am "make it better"

git push heroku master

And there you go

https://shrouded-gorge-59241.herokuapp.com/#/

Ahd it WORKS!!!!

It took time for the service to start (I hit the endpoint to quick)

lionel5116/CheckMate: Had to r... Xshrouded-gorge-59241 | Heroku XReact App X+

**Tip:** Getting the solution run in a docker container

```
1 #docker build -t checkmateappv2:latest .
2 #A
3 FROM node:16
4
5 #copy over main server file
6 #B
7 COPY server.js /server.js
8
9 COPY package*.json ./
10
11
12 #E
13 EXPOSE 5500 3000
14
15 #C copy directories for client
16 COPY client/ /client
17
18 #copy directories for service
19 #C
20 COPY config/ /config
21 COPY middleware/ /middleware
22 COPY models/ /models
23 COPY routes/ /routes
24
25
26 #F npm install on server
27 RUN npm install
28
29 #F npm install on the client
30 RUN npm install --force --prefix client
31 RUN npm run build --prefix client
32
33 #D
34 #ENTRYPOINT ["npm", "start"]
35 #ENTRYPOINT ["node", "server.js"]
36 ENTRYPOINT ["npm", "run", "dev"]
37
38 #A The base image to build upon
```

Notice line 13, this is how you expose both ports  
3000 is for the client app  
5500 is for the NodeJS app

Line 16 is copying the client folder's contents

line 30 ad 31 runs the install and build of the react app

line 36 runs your custom command – (npm run dev)

To run the image

```
lioneljones — zsh — 132x33
Last login: Wed Oct 26 09:08:53 on ttys000

### To run your image

```
docker run --name checkmateappv2-container -p 3000:3000 -p 5500:5500 -d
checkmateappv2
```

```
docker inspect checkmateappv2-container
```

To grab the id only

```
docker inspect --format="{{.Id}}" checkmateappv2-container
```

But I get an error (need to research this)

To remove your image

```
docker rm 6ee37b18d2f490e5fa36ee801df687a9fd4d16e74f2cbc1e17c0ed135ee62276
```

Below is the end user process

If you already have a container that your ran. Then you stopped and restarted your machine. The container maintains it's id and configuration. You will see it below

Just hit the start button

And as you can see below, it still has it's settings

```
lioneljones -- zsh -- 169x27

Mar 24, 2020

10 key moments in this video

**Tip:** Running VSCode from command in terminal on mac m1

<https://code.visualstudio.com/docs/setup/mac#:~:text=You%20can%20also%20run%20VS,code'%20command%20in%20PATH%20command.>

## Launching from the command line

You can also run VS Code from the terminal by typing 'code' after adding it to the path:

- Launch VS Code.
- Open the **Command Palette** ( `cmd+Shift+P` ) and type 'shell command' to find the **Shell Command: Install 'code' command in PATH** command.

- Restart the terminal for the new `$PATH` value to take effect. You'll be able to type 'code .' in any folder to start editing files in that folder.

**Tip:** Comparing both versions of CheckMate

CheckMateV2 is my favorite:

**Pros:** It's a smaller bundle (it does not use more webpack (ver 5), it builds 200% faster

When you make changes, it reloads faster.

It does crash when you deploy to Heroku

**Cons:**

It has a huge set of warnings with bootstrapblanex (but it still works tho)

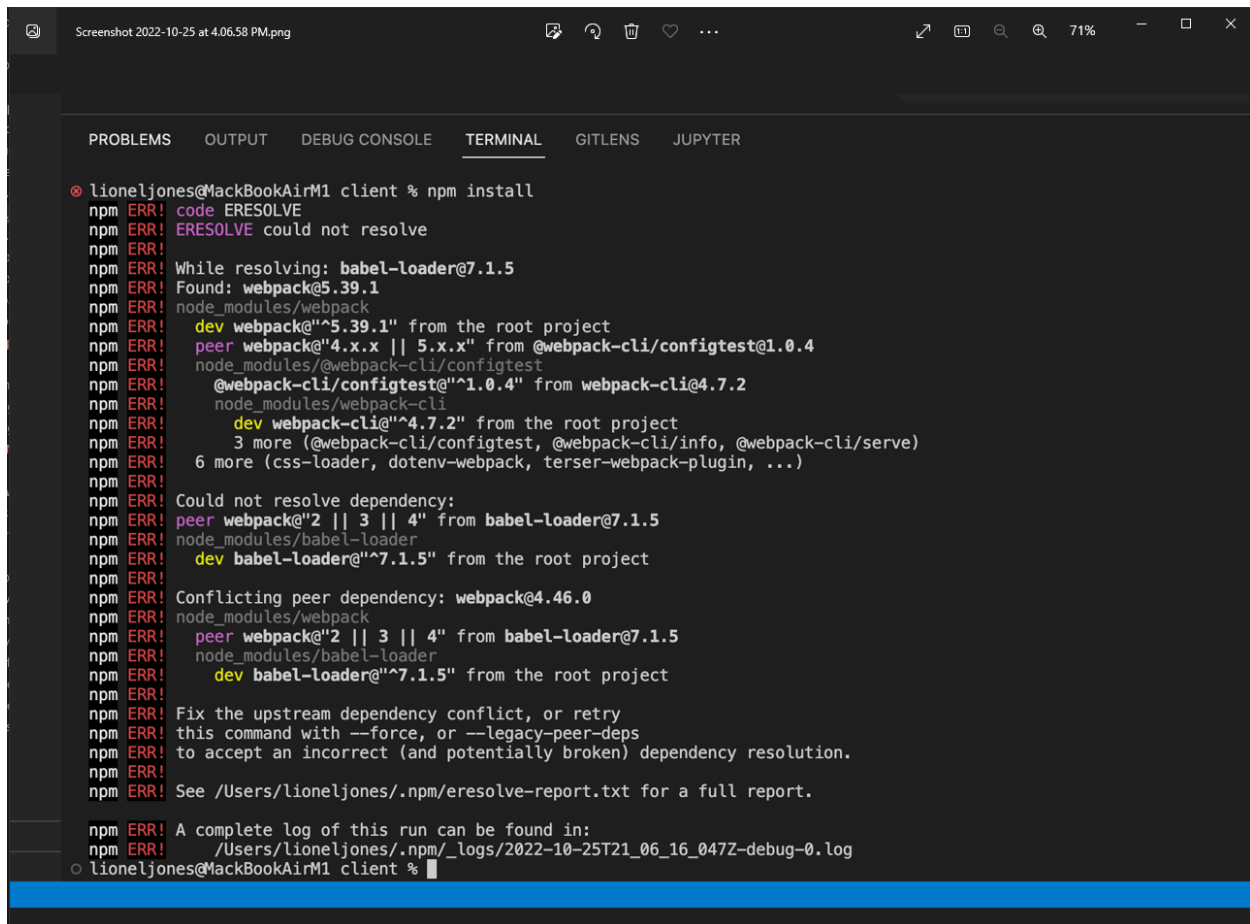

**Tip:** Fixing Macbook deploy issues

For the error below when trying to clone the repo

I had to run the command to update my xcode tools  
xcode-select --install

This is common everywhere

```
lioneljones@MackBookAirM1 client % npm install
npm ERR! code ERESOLVE
npm ERR! ERESOLVE could not resolve

lioneljones@MackBookAirM1 client %
```

see the message  
npm install --force

I have to use this everywhere, even in my deploy scripts for Heroku

**Tip:** Fixing this error: - options.allowedHosts[0] should be a non-empty string  
While doing npm run start, I was getting ERRORS , no matter what I did. The way I fixed it was to remove the proxy entry from the package.json file

```
49     not op_mini all
50   ],
51   "development": [
52     "last 1 chrome version",
53     "last 1 firefox version",
54     "last 1 safari version"
55   ]
56 ]
57 }
58
```

I am not use a proxy anymore anyway.

I decided to create another version of the app without webpack – causing too many issues

<https://reactjs.org/docs/create-a-new-react-app.html>

<https://react-bootstrap.github.io/getting-started/introduction/>

npm install react-bootstrap bootstrap

In Index.js

```
index.js - checkmatev2 - Visual Studio Code
index.js M x  NavbarMain.js U  App.js M
src > index.js > ...
You, 1 second ago | 2 authors (p00149021@houstonisd.org Mag17615@7 and others)
1 import 'bootstrap/dist/css/bootstrap.min.css';
2 import 'bootstrap/dist/js/bootstrap.bundle.min';
3 import React from 'react';
4 import ReactDOM from 'react-dom/client';
5 import './index.css';
6 import App from './App';
7 import reportWebVitals from './reportWebVitals';
8
9 const root = ReactDOM.createRoot(document.getElementById('root'));
10 root.render(
11   <React.StrictMode>
12     <App />
13   </React.StrictMode>
14 );
15
16 // If you want to start measuring performance in your app, pass a function
17 // to log results (for example: reportWebVitals(console.log))
18 // or send to an analytics endpoint. Learn more: https://bit.ly/CRA-vitals
19 reportWebVitals();
20
```

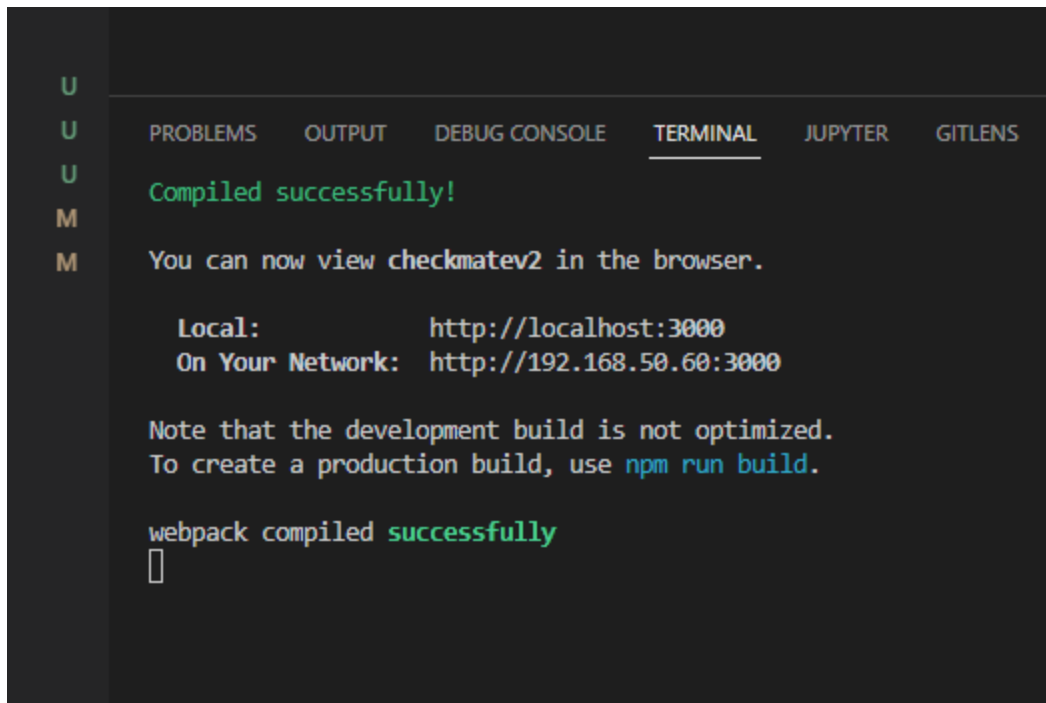

And so far, no warnings

```
npm install react-router-dom --save
```

```
npm install react-router-dom@5.2.0 react-router@5.2.0
```

And this is all we need to do to get the initial bootstrap to work

The image shows a screenshot of the Visual Studio Code (VS Code) interface. On the left, there is a sidebar with a file explorer showing a directory structure with files named 'U', 'U', 'U', 'M', and 'M'. The main area of the editor displays the 'TERMINAL' tab, which contains the following text:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  JUPYTER  GITLENS

Compiled successfully!

You can now view checkmatev2 in the browser.

Local:      http://localhost:3000
On Your Network: http://192.168.50.60:3000

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled successfully
█
```

npm i axios

npm i redux-devtools-extension

Install all of this for REDUX

npm i react-router-dom redux react-redux redux-thunk moment react-moment

And after adding REDUX, it still builds fast

I have the base code:

## CheckMate Login Screen

Enter your Login Credentials

Email address

Password

Sign In

Don't have an account [Sign Up](#)

And its lightning fast

To allow for environment variables  
npm i env-cmd

Make sure you put it at the root

So the login screen and register screen is finished

For the bootstrap tables, I had to use the `--force` with it

```
10     "bootstrap": "^5.2.2",
11     "env-cmd": "^10.1.0",
12     "moment": "^2.29.4",
13     "react": "^18.2.0",
14     "react-bootstrap": "^2.5.0",
15     "react-bootstrap-table-next": "^4.0.3",
16     "react-bootstrap-table2-filter": "^1.3.3",
17     "react-bootstrap-table2-paginator": "^2.1.2",
18     "react-bootstrap-table2-toolkit": "^2.1.3",
19     "react-dom": "^18.2.0",
20     "react-moment": "^1.1.2",
```

i.e `npm install react-bootstrap-table2-toolkit --force`  
`npm i uuid`
